Carlos Amaro   Web Developer

carlosovalle@soultech.studio | [Linked In/in/carlos-amaro-dev](#) | [Github/includeovalle](#)

I am a bilingual (Spanish-English) software developer with four years of experience developing responsive web pages. I have a strong understanding of web application development using technologies such as JavaScript, TypeScript.js, Node.js, React.js, and PostgreSQL. I am skilled in configuring, documenting, supervising, updating, and deploying various projects, with a particular focus on code organization.

Professional Experience

Teran TBWA: **Software Engineer**   mar/22 – sept/24

- Although I am employed by Teran TBWA, I have been outsourced to Egplusww/us for the entire time. During this period, I was actively involved in building reusable components using React.js and SASS, which were utilized across several production systems. These components were integrated into frameworks like Next.js and Gatsby.js. Additionally, I configured projects using remote servers.
- I possess strong proficiency in MAC, Linux, Windows, Shell, Shell-scripting, Git, HTML, SASS, CSS, Tailwind CSS, Styled Components, JavaScript, TypeScript.js, Node.js, Express.js, React.js, Next.js, Gatsby.js, PostgreSQL, Jira, Figma, Trello, Slack, and Teams.
- I led the frontend development of three satisfaction surveys, coordinating with various technical teams to ensure timely deployment.

Lataval: **Frontend Web Developer**   oct/21 - mar/22

- I was responsible for data cleaning, which involved identifying patterns in the data and modifying it to ensure data integrity across both systems. I developed an SQL script that automated most of this process. In some cases where the initial script wasn't sufficient, I created a server-side script utilizing regular expressions to catch scenarios the first script missed. This ensured the cleanup of over seven million user records during my time with the company.
- I was also part of the development team that created an internal CMS for the company. One of the project's key features was generating draggable elements and saving their positions on the user's screen. For this, we leveraged JavaScript's drag-and-drop properties.

Soultech Studio: **Own Freelance Business**

- When working with independent clients, this is the business front I use.
- Through this venture, I have taken on various roles for clients I provide services to, from initial contact and meetings to project estimations, professional email configurations, web development, technology stack selection based on project and client needs, version control, deliverables, and ongoing site maintenance.
